

The H2H Euthanizer is a mobile device that kills poultry individually using an electric current. The animal is supported, head down, in a flexible funnel. The head is fixed between two adjustable electrode plates (the negative electrode) and the other electrode is placed on the cloaca. When the start button is pressed a 220V/50Hz electric voltage is applied to the head and cloaca of the bird. The basic principle behind the method is that the administered electric current flow causes immediate and irreversible stun resulting in the death of the animal.

## Available early 2019

- Bird remains calm in cone
- No signs of stress
- Controllable, irreversible euthanization
- No return of respiration
- Head to heart
- Electrical power **220Volt**
- Frequency **50Hz**
- Portable device
- Rechargeable battery
- Safe and easily applicable by 1 person
- **Compliant to EU Regulation 1099/2009**
